

People are more open than ever when it comes to behavioral health.

But there’s still more we can do, together.

In 2024, 77% of employers reported an increase in mental health concerns compared to 44% in 2023.¹ This reflects the growing normalization of behavioral health awareness in the workplace. But while prevalent conditions like depression and anxiety are often major points of discussion, less common but equally important mental health conditions are also significant factors requiring smart solutions from employers. **Let’s look at what we can do, together.**

\$1 trillion

is the current annual global cost to employers for depression and anxiety.²

\$6 trillion

is the projected cost in six years, including conditions like substance use disorders, suicide, eating disorders and pediatric behavioral health.³

Investing in these key, less prevalent behavioral health conditions can save future costs.

Substance Use Disorders	^
Suicide	^
Eating Disorders	^
Obsessive-compulsive Disorders	^
Pediatric Behavioral Health	^

We’re here for you. So you can be there for them.

Every individual’s and organization’s support needs are unique and complex. It’s important to know what’s happening at the highest level and what issues may be less at the forefront. Explore our [behavioral health white paper](#) to better understand how we can come together to support your workforce.
